ZyBrid™

WHAT WE DID:

Since 2002 Zytronic has been providing a range of PCT™ touch sensors and laminated display protection screens to Diebold facilities around the world.

These are used in Diebold's range of ATM and self-service banking kiosks.

Diebold is a global leader in providing integrated self-service, security systems and associated services and is the largest U.S. manufacturer of ATMs. Headquartered in Ohio, USA, the company employs more than 16,000 employees, with manufacturing and representation in more than 90 countries worldwide. Established 150 years ago, it is a respected company whose shares are traded on the NYSE.

In 2012, Diebold recognised Zytronic with a Silver Award Status as part of their global supplier recognition programme for Zytronic's continued excellence throughout 2011. To qualify for an award, suppliers had to meet and exceed stringent performance standards set by Diebold.

Zytronic continues to work closely with Diebold to develop innovative, durable and functional user interfaces for its future range of self-service products.

Similar to Point of Sale (POS) terminals; banking kiosks and automatic teller machines (ATM's) increasingly put control of a financial transaction at the fingertips of the customer, for reasons of convenience and cost management. Due to their nature, high levels of vandal resistance and the option of increased privacy are important in such applications. PCT™ offers both, and has been a proven and trusted touch technology in this global market for more than a decade...
